

Info to Distributors, Partners and Suppliers, 2016-10-07 (+ press release)

Dear Business Partner,

Over the last 2 years, we have substantially accelerated our commercial efforts by introducing the new Kibion® Dynamic platform to the market as well as adding several team members giving our distributors and customers around the world increased support. The increased commercial focus has also resulted in a number of business discussions where Kibion has been approached by companies within our field of life science to discuss different partnering alternatives.

Out of these partnering discussions, we are now proud to announce that Laboratory Mayoly Spindler has acquired Kibion to become the leading manufacturer of Urea Breath Tests around the world. This acquisition will strengthen both companies' position globally and generate outstanding synergies within the Gastro field where Laboratory Mayoly Spindler today already has a strong position and product portfolio as well as several new products in the pipeline for the years to come.

The Kibion Team will remain unchanged and myself will continue as CEO. Feel free to get back to your contact person within Kibion to learn more about this positive news.

Kind Regards,

Petter Bäckgren
CEO
